Summary

Software Engineering student (graduating Jun 2027) with production experience in iOS/Flutter mobile development, cloud-native infrastructure (Docker, Kubernetes, K3s), and CI/CD automation. Shipped apps deployed at real businesses; building a self-hosted, Wasm/Docker hybrid campus PaaS platform on K3s with GitOps.

Skills

Languages: Python, Dart, Swift, Java, SQL

Mobile: UIKit, SwiftUI, Flutter, MVVM, Clean Architecture, Firebase, Supabase

Backend & Databases: Node.js, REST APIs, PostgreSQL, JWT, Supabase (Auth, Edge Functions)

Cloud & DevOps: Docker, Docker Compose, Kubernetes (K3s), ArgoCD, Gitea, GitHub Actions, WebAssembly (Wasm), GCP, Linux

Tools: Git, Xcode Instruments, Prometheus, Grafana, Loki, Traefik, cert-manager

Methodologies: Agile

Education

B.Sc. Software Engineering — Muğla Sıtkı Koçman University

Sep 2022 – Jun 2027 (expected)

Full English-medium curriculum

Experience

iOS Development Intern — Teknasyon A.Ş.

Jul 2025 – Aug 2025

- Built 2 production iOS apps (Swift, UIKit, SwiftUI); optimized cold-launch time via lazy loading and Kingfisher image caching.
- Refactored 2 legacy codebases to MVVM + dependency injection, decoupling modules and accelerating feature delivery cycle.
- Resolved memory leaks using Xcode Instruments, stabilizing heap allocation under sustained workloads.
- Implemented Firebase authentication and real-time Firestore leaderboard supporting concurrent multi-user sessions.

Projects

Campus PaaS Platform — K3s, ArgoCD, Gitea, WebAssembly

Jan 2026 – Present (*In Progress*)

- Built and operate a hybrid PaaS for MSKÜ DevOps Lab running WebAssembly alongside Docker containers on a self-managed 5-node K3s cluster.
- Implemented GitOps continuous deployment (ArgoCD + Gitea + Zot registry) with resource quotas for multi-tenant student environments and end-to-end observability (Prometheus, Grafana, Loki).
- Deployed and operate production-grade infrastructure: TLS automation (cert-manager), ingress (Traefik), and self-hosted CI/CD (Gitea Actions, n8n).
- Hosting a research module for cluster availability replay and analysis.

VBT Hackathon 2026 Platform — Next.js, Hono, Supabase, Cloudflare R2

Jan 2026 – May 2026

- Built full-stack hackathon management platform (Next.js 16 App Router, Hono API, Supabase, Cloudflare R2) deployed on Railway; served 75 participants across 15 teams.
- Implemented 4-step application flow with CV upload (R2 signed URLs) and admin panel with status management and automated email notifications via Resend.
- Automated deployment via GitHub Actions → Docker → GHCR → ArgoCD GitOps pipeline.

Rituals App — Flutter, Node.js, GPT-4o, Docker

Mar 2025 – Dec 2025

- Designed Node.js REST API with PostgreSQL (normalized schema, indexed queries) and JWT auth to handle concurrent user workloads.
- Shipped AI routine generation engine (GPT-4o, structured JSON output) with validation and fallback logic, ensuring production reliability.
- Built offline-first cache layer and device management, eliminating unnecessary API calls and enabling full offline functionality.
- Containerized full stack with Docker Compose, removing environment drift across the development team.

QR Menu — Flutter, Google Sheets API

Jul 2025 – Present

Deployed dynamic digital menu system (Google Sheets as headless CMS) at 3+ local businesses, eliminating recurring print costs.

Caffeverse — Flutter, Firebase

Sep 2024 – Dec 2024

Developed location-based coffee shop price comparison app with Google Maps API and Firestore real-time sync.

Leadership & Community

MSKÜ Data Science Community (VBT) — Finance & Sponsorships Lead

Feb 2025 – Jun 2026

- Co-organizing VBT Hackathon 2026 (Smart Cities, 24 h) — 75 participants, 15 teams, 50,000 TL prize pool; secured sponsors including Muğla Metropolitan Municipality and MSKÜ.

MSKÜ ACM Student Chapter — Vice President

Jun 2026 – Present

Languages

Turkish: Native **English:** Professional working proficiency (B2+)
